Resmed

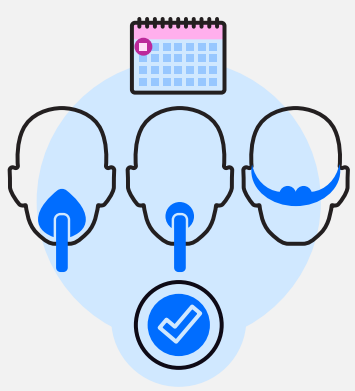

The Resmed Air11™ Therapy Ecosystem

Supporting effective PAP therapy experience from setup to long-term use.

Adherence to PAP therapy remains a key challenge in long-term OSA management. There is an opportunity to improve patient's PAP experience and help them to stay on therapy over time.

Initiating therapy

The right mask is key to long-term adherence[1]

Our key masks achieve fit rates of 94% or higher[2-5]

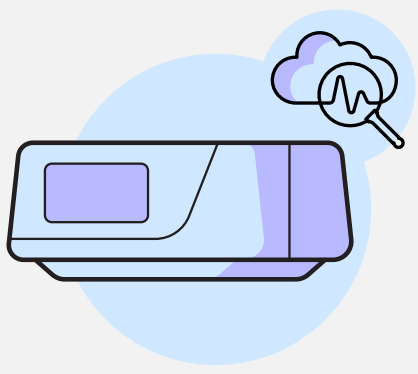

Designed to fit a broad range of patients, our key masks achieve fit rates of 94% or higher[2-5]. **AirFit™ and AirTouch™ masks** are organised into intuitive categories - for reassurance seekers, simplicity lovers and active sleepers - to help simplify personalised mask selection.

When the mask feels right, patients are more comfortable and therapy is easier to begin.

Simplify setup and follow-up

Masks and devices that work together can help make therapy easier to manage.

Validated mask-device settings* help provide accurate leak correction, reliable event detection and consistent therapy data.

First weeks of therapy & beyond

Support patient engagement

Ongoing guidance helps patients settle into therapy and build confidence over time.

myAir™ app enables Air11 users to track their sleep therapy progress, receive 24/7 personalised support and provide subjective feedback on therapy acclimatisation. This empowers them to resolve minor issues on their own[6] and give you an earlier opportunity to spot concerns and help patients through early challenges before therapy is disrupted[7].

myAir™ is associated with:

up to 47% fewer therapy drop-outs[8]

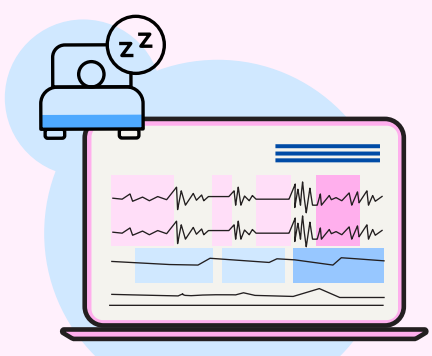

up to 21% fewer support calls in the first year[8]

Monitor progress remotely

Small issues early on can quickly affect therapy.

AirView™ helps you monitor therapy remotely, identify issues early and intervene quickly when patients need support.

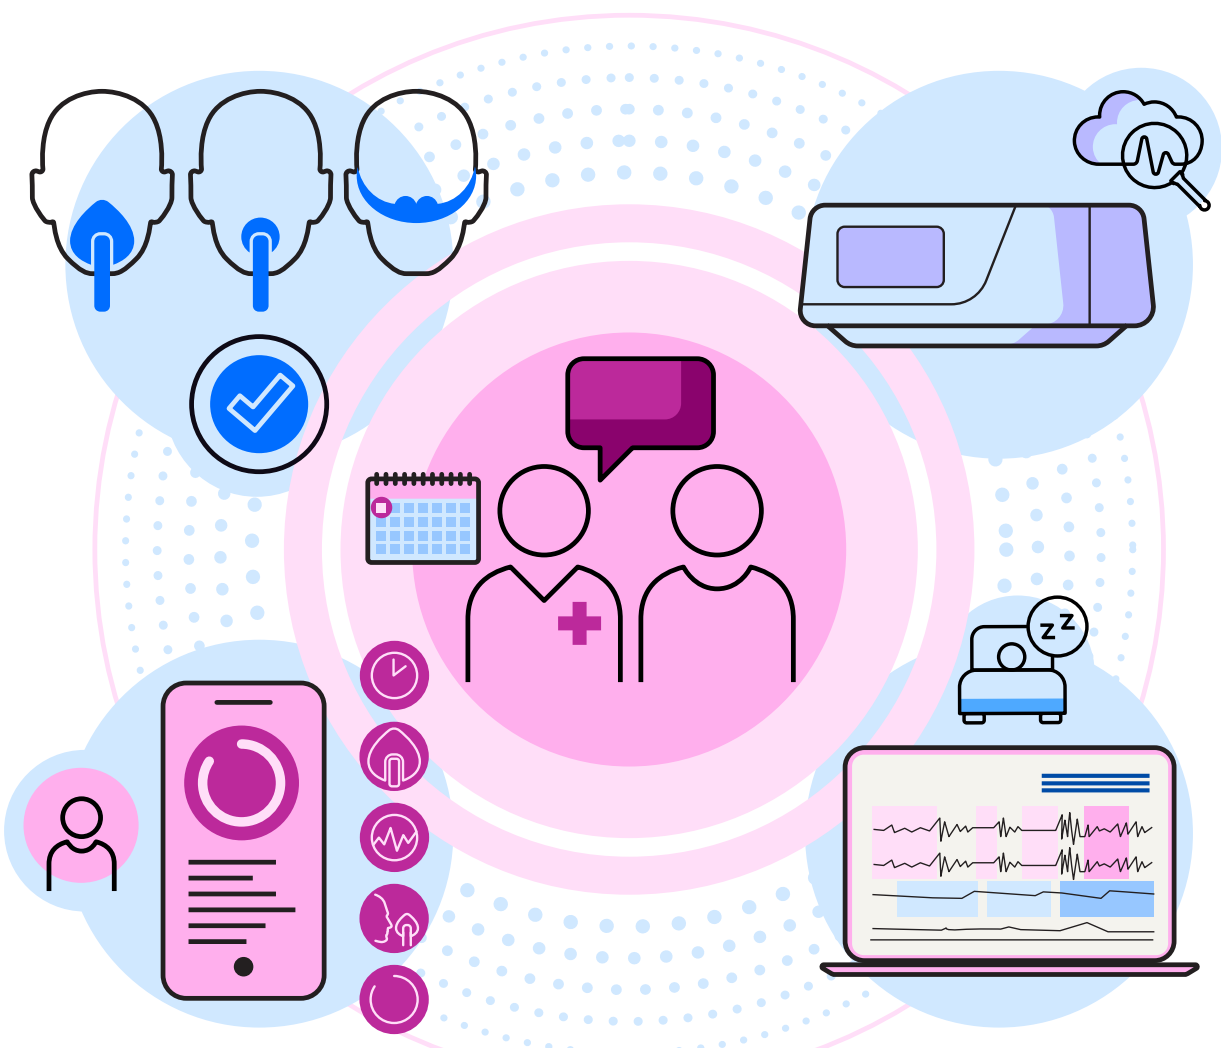

Consistent support and timely intervention in the first weeks predict better adherence and outcomes[7].

One connected therapy ecosystem

Keeping patients connected to therapy from the start

AirFit / AirTouch masks, Air11 devices, AirView and myAir work together to keep you close to patients from setup to long-term therapy, helping you to make follow-up care more efficient[9].

PROMOTIONAL MATERIAL – CE-marked medical device (CE0123). Manufacturer: Resmed. Local contact: Resmed.
