Non-vented masks

Non-vented full face mask that fits and seals with ease[1,2]

- Can be used for non-invasive ventilation* with the benefits of an AirFit F20 mask
- Performs under high pressure and bi-level pressure treatment[3]

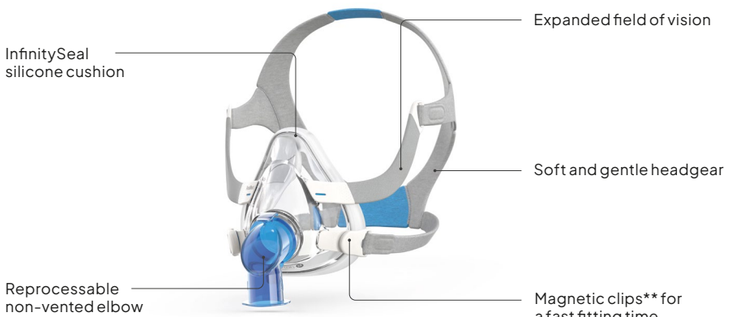

Therapy pressures	3–40 cm H_2O

Resources

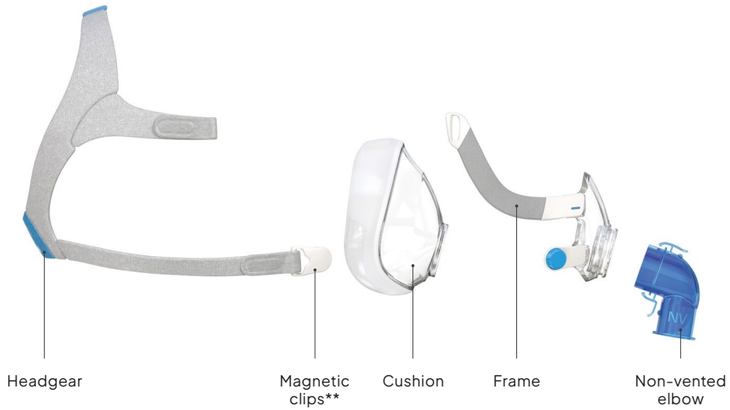

* AirFit F20 NV is compatible with Astral ventilators and suitable for patients requiring non-life support ventilatory assistance.
** The mask contains magnets that may interfere with certain implants or medical devices. Please refer to the user guide for complete information, including magnet contraindications and warning.
1 Resmed fitting study of 39 patients, vented version, conducted in 2015. Data on file; ID A3830701.
2 Resmed study of 22 experienced full face mask users, vented version, conducted in 2016. Data on file; ID A3810791.
3 AirFit F20 NV is validated at therapy pressures from 3 to 40 cm H_2O. Refer to AirFit F20 NV user guide.

Practical info

Care and cleaning

The most effective therapy is delivered through a clean, well cared for mask. An unclean cushion, skin irritation and overstretched headgear may indicate a patient's therapy will be less effective and may often cause them to wake during the night. We recommend cleaning the mask regularly to ensure optimum therapy.

Daily

- Hand wash the mask system components (silicone cushion, elbow, frame, etc.) in warm, soapy water.
- Do not use soaps with added scents. We recommend plain liquid soap.
- Rinse well and allow to air dry out of direct sunlight.

Weekly

- Hand wash the headgear in warm, soapy water.
- Do not use soaps with added scents. We recommend plain liquid soap.
- Rinse well and allow to air dry out of direct sunlight

Caution

- Do not use solutions containing vinegar, bleach, chlorine, alcohol, aromatics, moisturisers, antibacterial agents or scented oils to clean any part of the system or air tubing. These solutions may cause damage and reduce the life of the product.
- Do not expose any part of the system or tubing to direct sunlight as it may deteriorate the product.
- Do not wash the mask in the dishwasher.
- Do not iron the headgear.

If any visible deterioration of the mask or a component is apparent (cracking, tears, etc.) the mask or a component should be discarded and replaced.

⚠ The AirTouch N20 and F20 memory foam cushion requires different maintenance and care relative to a silicone cushion. It should be replaced regularly. If cleaning is required, wipe the cushion with a CPAP wipe or equivalent and then allow it to dry.
Important – do not get cushion wet.

Home

Magnets

Resmed magnet guide

- Taking the mask on and off is convenient and easy, with magnetic clips that guide the headgear to the frame in seconds.
- Masks containing magnets: AirFit F40, AirFit F20 NV, AirTouch F20, AirFit F30, AirFit F30i, AirFit N20, AirTouch N20 and AirFit N10.

Please refer to the user guide for relevant information related to any contraindications, warnings and precautions to be considered before and during use of the product.

Contraindication
Masks with magnetic components are contraindicated for use by patients where they, or anyone in close physical contact while using the mask, have the following:
- Active medical implants that interact with magnets (i.e., pacemakers, implantable cardioverter defibrillators (ICD), neurostimulators, cerebrospinal fluid (CSF) shunts, insulin/infusion pumps)
- Metallic implants/objects containing ferromagnetic material (i.e., aneurysm clips/flow disruption devices, embolic coils, stents, valves, electrodes, implants to restore hearing or balance with implanted magnets, ocular implants, metallic splinters in the eye)

Warning: Keep the mask magnets at a safe distance of at least 6 inches (150 mm) away from implants or medical devices that may be adversely affected by magnetic interference. This warning applies to you or anyone in close physical contact with your mask. The magnets are in the frame and lower headgear clips, with a magnetic field strength of up to 400mT. When worn, they connect to secure the mask but may inadvertently detach while asleep. Implants/medical devices, including those listed within contraindications, may be adversely affected if they change function under external magnetic fields or contain ferromagnetic materials that attract/repel to magnetic fields (some metallic implants, e.g., contact lenses with metal, dental implants, metallic cranial plates, screws, burr hole covers, and bone substitute devices). Consult your physician and manufacturer of your implant / other medical device for information on the potential adverse effects of magnetic fields.

This content is intended for health professionals only. Please refer to the user guides for relevant information related to any contraindications, warnings and precautions to be considered before and during use of the product.
